GOV. PINCHOT DEFEATED BY EDITOR STRASSBURGER

Chief State Executive Not to Head Delegates to National Convention

PENNSYLVANIA'S BIG DELEGATION FOR COOLIDGE

The primary vote was unusually light. Very little interest being shown this year in election. Both Jas A. Connelly and Ella J. Mountz were leaders as delegates to the National convention. Gifford Pinchot was defeated by Ralph B. Strassburger as delegate at Large, G. Scott Smith was victorious over Sylvester Rich as candidate for state Committeeman.

At the local polling place, Wm. Haugerford was Judge of Election John Connelly and J. M. Wiant Inspector Kitty Hunkiville and Martha Colegrove, Clerks.

The Borough Vote follows:

BORO VOTE

Republican.

For President.

P. J. Denman	3

Representative in the General Assembly.

Maxwell J. Moore	2

SEVENTY NINE DELEGATES FOR PRESIDENT COOLIDGE

Pinchot was defeated for the place on the list of seven delegates at large by Ralph B. Strassberger, millionaire owner of the Norristown Herald who, two days before election received full support of the republican organization in Philadelphia, Allegheny and other large Counties.

President Coolidge is now assured of the large vote of seventy nine delegates from the Keystone State at the Cleveland convention.

For the first time in the memory of the oldest elector, Pennsylvania has failed to send its governor to the National Convention of the party whose politics he embraced.

Miss Ruth A. Pytcher Becomes Bride of Mr. Neall A. Holder

Monday afternoon at 2:30 o'clock at the parsonage of the First Methodist church on Congress street, Bradford, Rev. S. A. Keen performed the ceremony which united in marriage Miss Ruth A. Pytcher of Ormsby, Pa., and Neall O. Holder, son of Mr. and Mrs. W. G. Holder of Smethport. Miss Dori Barthlomew of Bradford was bridesmaid and Hamlin D. Redfield of Smethport was best man.

The bride was attired in a handsome suit of tan Flamingo with hat to match. She wore a corsage bouquet of sunburst roses. Mr. and Mrs. Holder left by motor on a wedding trip the destination of which was kept secret. They will reside at Tarentum, Pa., where Mr. Holder has a responsible position with the Heinz Pickle Company. The bride is a registered nurse well known in this city. For some time she has been located in Cleveland where many pre-nuptial entertainments were given for her. Yesterday noon preceding the wedding Mrs. L. E. Maury of Bradford entertained the nuptial party at luncheon at her home on Boylston street.

Mr. Holder is a world war veteran and a young man of sterling worth, he is well known here where he lived until about a year ago when he accepted his present position.

The Miner and a host of friends extend congratulations.

MAN FALLS FROM DERRICK AND IS INSTANTLY KILLED.

Ernest Danielson, age about 30 years, of Warren, a tool dresser employed by the Pennsylvania Gas company, was instantly killed yesterday afternoon when he fell from the top of a derrick at the Ludlow field, along the Kinzua road, a short distance from Kane.

Mr. Danielson had climbed to the top of the derrick to change a pulley preparatory to putting in a new casing. The derrick was covered with snow and sleet which had falled during the morning and his hands slipped when he attempted to raise himself over the top of the derrick and he fell backward, hitting the roof of the engine house, he crashed through and landed on the floor. He was dead when Enoch Nelson, driller, reached him.

Deceased was well known in the field around Kane. He is survived by his father and two brothers, all of Warren, Pa.—Kane Republican, April 19.

JOINS MONTREAL TEAM

Harold Peeler of East Smethport famous base-ball catcher left Wednesday to join the Montreal team of the Eastern Canadian League. He is a son of Mr. and Mrs. John Peeler of East Smethport.

HIGHWAY DIRECTION SIGNS UNDER STATE SUPERVISION

To Be of a General Conformity and Will Be Erected Without Delay

RE-ORGANIZATION OF BOY SCOUTS UNDER WAY

The Coropus Club held their semi-monthly meeting at the Munn restaurant Monday with eighteen members present. Many matters of local interest were informally discussed but definite action was deferred until some future date. At a previous meeting of the club the matter of purchasing and erecting sign boards along the highways leading into Smethport was acted upon and a committee was appointed to make all necessary arrangements. This committee, through correspondence with the state department, learned that it was the intention of the department to erect all highway direction signs in the state in order that they may be of a regulation size and design. The committee also learned this work would be started in the immediate future.

Mr. Hockenbury reported that he had received all the necessary data relative to the reorganization of the Boy Scouts and that he would call a meeting of the boys at some near date that the reorganization may be perfected without unnecessary delay. This sure will be good news to our future statesmen, because it means the realization of their hopes and desires.

At the next meeting of the club, which will be held at the Grand Central hotel Monday, May 5, it is expected that Mr. Crossman will be present and arrangements for the boys potato raising contest, a report of which appeared in a previous issue of the Miner, will be made at that time. There are about twenty lads in this section that have qualified as contestants and much keen rivalry is sure to develope.

The attendance prize, donated by E. A. Studholm, was drawn by J. B. Eastman.

MAY JAIL YOUTH HELD HERE WITH ESCAPADES

An 18-year-old youth giving his name as Tony Spehar and his home as Lewis Run, Pa., is being held at police headquarters on an open charge pending an investigation of his activities for several days previous to his arrest. Spehar was arrested on a charge of violating the city traffic ordinance. While he was being booked at police headquarters a call was received from the authorities at Mt. Jewett asking police to be on the look out for a car stolen from that place. An examination of the license plates on the auto driven by Spehar revealed that it was the Mt. Jewett car. When searched a loaded revolver and $19.20 were found on Spehar's person.

Chief of Police Travis, of Bradford, and John Allison, McKean county detective, were notified of the arrest and arrived here this afternoon to examine Spehar. It is believed he may be implicated in a recent postoffice robbery at Kushequa, Pa. He will also be quizzed relative to recent crimes committed in Bradford.

Spehar was arrested early today when he drove his car over a hose stretched across North Union street during the fire at the Nu-Way Shoe Repair shop. Special Officer Matthew Flynn signaled to Spehar to stop his car as he approached the hose but he disregarded the warning. Flynn overtook him a short distance away and the arrest followed.

The car stolen in Mt. Jewett was owned by J. W. Pier—Olean Herald, April 19.

BOY FIRED BULLETS FROM A WINDOW.

Yesterday afternoon bullets entered the west wing of the McDade house near the corner of Greeves and Chase streets, occupied by Mr. and Mrs. John Fleming, who recently moved there from the New Thompson hotel, after selling the same, and narrowly missed striking Mrs. Francis Colligan a daughter of Mr. and Mrs. Fleming. One of the bullets came through a window and struck and shattered a mirror within a few inches of Mrs. Colligan's head.

Police informed of the happening have found that the shots were fired from a 22-calibre rifle in the hands of a 12-year-old boy named Halloway from a window in his parents apartments on the third floor of the McCrory building. No arrests had been made at noon today.—Kane Republican, April 19.

LEGION MEN BUSY AT LYCEUM

The work of repairing the lyceum is being carried on steadily, one man being at work all the time, while some days quite a number are on hand, and busy every minute.

The repairing of the part under the stage is being done now, the sills of the partitions and the posts supporting the stage will need to be replaced, as the old ones were found to be rotten.

GIRL BREAKS LEG TWICE IN SHORT TIME.

Etta Axelson sixteen year old daughter of John Axelson, who lives at corner of Bank and Nelson St. had the misfortune to fall the latter part of the week and break her leg. The young lady fell down stairs some time ago and broke her leg, and was able to get around the house on crutches when the second accident occurred which again rendered her helpless.

MAN CUT AT WINDOW GLASS FACTORY

Norman Schroth who is employed at the Interstate Window Glass Factory had his right thumb badly cut Wednesday April 16 by the breaking of a sheet of glass he was handling. He was brought to Dr. Chadwick's office where his injury was given attention.

Local Men Escape Injury When Car Goes Over Bank

A lucky accident occurred on the Eldred road near Coryville last Saturday, April 19th. When Mr. Jack Cramsey and his son Bob, and Hickory Pratt were driving to their work along that road.

Two of the shift men from the refinery who were coming to work from Eldred saw the local men coming and as the road being very narrow at that point they drew to their right and stopped so as to give Mr. Cramsey all the road they could, but due to some miscalculation and a little too much gas Mr. Cramsey's car left the road and toppled over the bank according to the refinery men, the only thing that stopped our citizens from being killed was a mess of briars which just kept the car on even balance it being necessary to cut the top in order to get the men out of the damaged car, no one was injured although all were badly shocked.

BARKING OF DOGS SAVES FAMILY FROM DEATH.

Olean, N. Y., April 22.—A faithful watch dog saved Mrs. George Hollamby and her eight children ranging in age from a baby in arms to 16 years, at midnight last night when the family home at Westons Mills, near here, was destroyed by fire.

The fire had gained much headway before the mother was awakened by the frantic barking of the dog. Even the bed clothing on the woman's bed was afire. She rescued the children, none of them being more than slightly burned.

The father, employed on a night shift arrived home to find his home burned to the ground and all furniture and personal belongings destroyed. Neighbors were caring for the family.

SALE OF FANCY WORK

St. Priscilla's Guild of St. Luke's church will hold a bazaar in the parish house, Wednesday evening April 20th at 8:30 o'clock. Fancy work, aprons and candy.

Easter Services Largely Attended In Smethport

Easter Sunday blew across some nearby snowbanks and into Smethport beautifully fair, rainy, calm and cloudy. The day from all appearance, was no different than any other Sunday here only that it was Easter and the one day in the year at least, some folks dress up. So far as the weather was concerned, it pleased those most who had been disappointed by their milliner, dressmaker or haberdasher. The clouds went in a most consoling manner for the unfortunates who had not been able to "catch up" to a new outfit for the grand parade and for the lucky ones it surely did dampen their enthusiasm. It seemsed that the sun would just wink at us and then roll away under a thunder cloud for an hour or so while we were favored with some wind, hail and rain and then appear again and say "How did you like that." Everything from a thunder storm to a snow storm with all the side dishes and entrees, together with all the winds of a Mah Jongg party.

A few new coats appeared on the ladies, as did also an occasional hat, but all were accompanied by rainsticks. Some young men not all—climbed out of bed, took a peep at the weather and tugged on a couple of suits of woolens and then their new "rags" and smilingly appeared before the gaze of the public and envy of their less fortunate friends. The old overcoat was happy in having a day "off," hanging on a nail back home revealing in its wrinkles, while its master was shivering but proud in the Easter parade.

The beautiful corsages of sweet peas, violets, Roses, Valley, etc., with their asparagus trimmings, all reminded us of the spring we are looking for and wondering at its delay. Monday the doctors had several visitors with "code in the 'ed" and to these the kindly man remarked, "Ah, yes, just a local condition. Take one of these every hour for the first day, then every three hours for a few days. I would also advise soaking the feet in mustard water tonight. If you feel well enough in a few days, just drop in and let me see how you are getting along." As for us, we did not mind one bit lying in bed for the one underling we possess, and which Ma washed the night before, to get dry. Sort of a Sunday morning habit, you know.

The churches were all well filled Sunday morning, notwithstanding the inclement weather, and those present were well paid for making the special effort to attend.

Owner Sees Stolen Car Speeding Past.

A Ford Sedan, belonging to J. J. Healy, which was being driven last night by his son, Gordon Healy, was stolen from its parking location, near the New Thompson hotel last night and, after an all night search was found this morning on the Wilcox road, near Kane. Young Healy and some friends had parked the car while they visited the pool room in the New Thompson and when they came out a short time later the car was gone.

As they stood on the sidewalk after discovering the loss, the missing sedan came speeding around the corner from Fraley to Greeves street with a man unknown to them driving it. The car disappeared along Greeves street and the young man secured another car and started in pursuit. They ran to Mt. Jewett without overtaking the stolen car and notified nearby towns and filling stations along the highways. There was not much gasoline in the sedan and they figured that the thief would soon have to stop.

The boys kept up the search until early this morning without success, but along in the forenoon word came that the car was found undamaged as before stated.—Kane Republican, April 19.

JOHNNY JONES HAD BADLY CUT HAND.

Johnny Jones, son of Mr. and Mrs E. W. Jones, who is employed at the Interstate Window Glass Factory cut his left hand between the thumb and forefinger Thursday evening about 9:30 when the sheet of glass he was splitting broke into fragments. The cut was a deep one necessitating the taking of three stitches. Dr. Robert Hamilton cared for the injury. At present the young man is so much improved as to be able to resume his work.

SEEDLINGS RECEIVED BY L. K. HOGARTH.

Through the efforts of L. K. Hogarth a large shipment of seedlings from the State Nurseries have been received here for distribution among farmers and others interested in reforestration. The seedlings are of larch Norway Spruce and Japan Red Pine.

Mr. Hogarth has also been able to secure fingerlings and fifteen months old trout from state and federal hatcheries for planting in the streams of McKean and adjoining counties.

BOY EVANGELIST DRAWS LARGE CROWDS.

Howard Specht of Pittsburgh, nine years old, boy evangelist, preached to a crowded church during all the services held here last week and Sunday at the Baptist church.

The child was a fluent, ready speaker, and seemed perfectly at home in the pulpit, as indeed he should be, having preached for several years, during which he has traveled over a large section of the country. His education in the meantime is carried on by his mother, who accompanied him.

All money over his expenses, derived from his preaching is used for the church work, the amount received from each church is credited to that church. Last year he gave $1000 to two missionaries in India for an automobile.

MAN CUTS OFF THUMB.

Joe Kockosky a man employed on the section who lives at Hyman Bierman's, had a peculiar accident Sunday evening when cutting off the head of a chicken with an axe he also cut off one side of his left thumb, down through the thumb nail. Dr. Burg Chadwick was called to attend the man's injury.

170 NORTH UNION ST. OLEAN, N. Y.

Responsibilities

The public are more than users of telephone service.

They, and no one else, provide the money necessary to conduct the business, and look to the business to pay adequately on that investment.

The public tell us what to do, when to do it, and where to do it.

They tell us how much service they want, and when and where they want it.

We take these figures and find out what it will cost to install the telephones, along with the central office equipment, wires, cables and buildings needed.

Then we must go to the public for the new money necessary to finance these additions.

The telephone using public pay us for their service, and they must pay us enough so that we can pay back to the same public, as investors, a reasonable return on the money they put into the business.

Or it might be summed up this way: Telephone rates must be adequate to enable us to make a reasonable return on the money invested in the business. Otherwise the public will not invest the new money needed to give the tremendous amount of new telephone service which is required by the people of this State.

THE BELL TELEPHONE CO. OF PENNSYLVANIA
L. H. KINNARD, *President*

Tenth of a series of advertisements regarding the present telephone service program in Pennsylvania.

"My Home Town"

In the concert hall of the Seamen's Church Institute of New York city a motley crowd of Scandinavians, Englishmen, Slavs, Italians and Americans, white and negro, were singing at the top of their lungs.

They had sung with some fervor before, when the words of familiar songs were flashed on the screen, but this was the song that really stirred them to enthusiasm:

Not here, not there, It's fifty miles from nowhere, but it's my home town.
Not here, not there, but I'm all set to go there,
So I'll make a break and take a look in the mirror.
Where's my hat?: Where's my coat? Where's my leather bag?
Send my trunk to the place written on the tag.
Not here, not there, it's fifty miles from nowhere, but it's my home town.

"As you see," says the lookout of the institute, "this is pretty bad poetry and the music was hardly better; but as these men from the far corners of the earth sang about their home town with that curious ring in their voices it almost brought tears to the eyes. A universal note had been struck."—The Outlook.

ESKIMOS TAKE CARE OF OLD

Elders' Counsel Always Considered—Mutual Kindness the Rule in Arctics.

Old people are held in great respect among the Eskimos and their counsel is always considered. They help as fast as they are able in the household work, the old men repairing weapons, harness, etc., and the old women in sewing and tending the lamps. In times of scarcity, as in winter, meat and oil is always shared around.

Directly a seal or deer is brought in it is cut up and sent to each needy family. In times of plenty each family is supposed to provide for itself, but old people, widows and orphans have always the first claim upon those who have the means.

Among these people mutual kindness is a general obligation. A widow or orphan child is never left alone, but taken into the house and family circle of the nearest relative. The widow gives her services in return for food and lodging and clothing and the child is cared for exactly as the man's own offspring.—Detroit News.

Fooling the Dogs.

A dog recently entered a church in Aberdeen, Scotland, and after causing much commotion was summarily ejected by the minister. The canine intruder would have passed almost unobserved in many a Highland kirk half a century ago, when it was the general custom for the shepherds to take their faithful collies with them to church.

In some districts, where the population was scanty, the congregation on Sunday mornings would frequently be made up half of humans and half of dogs. The canine auditors sat out the service with commendable patience until the announcement of the last psalm, when there was a general stretching and yawning preparatory to scampering out as soon as the benediction had been pronounced.

In one kirk the congregation determined that the service should close in more decorous fashion. When a strange minister officiated one Sunday he found all the folk sitting when he was about to pronounce the blessing, and paused for them to rise. "Say awa', sir," whispered one old shepherd near the pulpit, "we're a' sitting to cheat the dogs."

Dishonest Procedure.

The captain of a ship put into a little harbor in Scotland to recruit two seamen. One man presented himself with a sheaf of excellent testimonials, and another offered his services without possessing a single credential. As they were the only two applicants, however, the skipper had no choice but to engage both. Before the voyage had gone far the two new "hands" were instructed to swab the deck, and one of them was washed overboard together with his pail. The other rushed to the captain's cabin.

"D'ye remember that fellow wi' the great bunch o' characters you signed on?" he exclaimed.

"I do," replied the officer.

"Well," said the other, "he's awa' wi' your bucket."—London Tit-Bits.

Many Sailors Desert.

More than nine thousand foreign seamen deserted their ships in New York during the first six months this year. So many desertions are a serious handicap to foreign vessels; one British liner was delayed in port more than five hours while its officers rounded up enough men to replace forty missing employees. There is little that can be done to defeat the condition. By the seaman's act sailors, except Orientals, may have shore leave without restriction, and if the men fail to return it is very difficult to get track of them again.—Youth's Companion.

IN MEMORIAM.

Meacham—In loving memory of our dear wife, mother, daughter and sister Mariam, who departed her life away one year ago today, April 19, 1923, at the Port Allegany Hospital.

"O, how sad it wart to part
With her we loved so dear,
Out away in the prime of life,
In the midst of life and cheer.
Short and sudden was her call,
And she so dearly loved by all,
But Oh, how sweet thy promise given
We'll meet again wilt joy in heaven.

Husband, Son, Mother, Sister and Brother.

MAN'S HEART HELD IN PLACE BY PIANO WIRE

Seventy-Eight Feet Wrapped Around His Main Arteries to Protect Them.

Wonderful strides are being made in the field of medicine and surgery. It has been established that men today are living 10 to 15 years longer than those of 50 and 75 years ago and their energies and usefulness have been extended fully 15 years.

This is due to the fact that mothers are dressing more sensibly and taking to athletics and outdoor exercises, homes are better ventilated and more sanitary, people take better care of their teeth, stomach and feet and have physicians, surgeons or dentists make needed repairs.

Some of the other principal points brought out at the sessions and clinic of the American College of Surgeons, held in Chicago recently, were:

Cancer may be killed by "cooking" the cells with electricity, using a machine of low voltage with a high frequency current. This is especially useful when cancers are so located that an operation is impossible.

Exhibited at one clinic was a man who carries around with him 78 feet of piano wire, which is wrapped around his heart and main arteries. These had become flabby and threatened to burst. Since these were wrapped with wire, his health has greatly improved.

General use of electrically driven machines and saws for trephining and other bone operations is replacing the mallet and chisel and old-fashioned saw. This hastens the operation and saves the patient much of the shock.

Several exhibits were of "human carpentry," such as broken bones screwed together with metal plates, torn tendons replaced with silk, chins straightened and reupholstered, new eyebrows, new noses made from the skin of the forearm grown over a chicken bone or cartilege and a jaw, rebuilt with a U-shaped bone taken from the pelvis region. This grafted bone was padded with fat and skin was grafted over it, making a very serviceable jaw of proper lines.

The tibia is the most useful bone in the human body for repair work. It can easily spare quite a large section of itself and will when placed in other parts quickly assume the shape of the original bone. Consequently when a surgeon starts in to rebuild a broken man he calls upon the tibia for his basic material.

Boatload of Reindeer Imported for Ohio Zoo

Mr. Joseph Stephany of the Cincinnati zoo and one of the many reindeers imported from Norway to be used for educational purposes by the institution.

Wills Paintings to City

A wealthy favorite son has willed a collection of nearly 1,500 oil paintings to the city of Philadelphia. Included in the catalogue is a group of eighteen canvases from the brush of the delightful French lanscapeur, Jean Camille Corot. This is said to be the largest and finest assemblage of Corots in this or any other country. Such a gift cannot but elevate the artistic perceptions of a community. When people become bewildered in the chase for dollars it is fine to be diverted for even a moment to that which is beautiful in art. Municipal libraries and municipal art galleries are the hope of a higher civilization.

SCHOOL DAYS

Back words turn back words O Time in your flight!
Make me make me—make me a child again just for to night!
Back words flow back words O-O-O
O-O tide of the years,
I am so weary of toil and of tears!
Toil without—without—with recompense—
Toil tears all in vain—
Take them and give me my child hood again!
O tide
recompense
Copyright
Friday afternoon

WIDOWS LIVE IN A PALACE

Structure at Hampton Court Occupied by Pensioners of King George—Built by Cardinal Wolsey.

At least one Sunday a year I like to spend among the romantic surroundings of Hampton court, built by the great Cardinal Wolsey but taken from him by Henry VIII. I have often wondered why this disused palace is not used as a background by some enterprising "movie" producer, says Sir John Foster Fraser.

It is a delight to saunter through the banqueting hall and the audience chamber and the king's bedroom and the queen's antechamber and look at the paintings by Peter Lely and Godfrey Kneller of the ladies who were court favorites in the roystering days of the restoration after Charles II came back to the throne.

I generally go down to Hampton court to visit a dear old lady, for though the palace belongs to the king, he makes no use of it except that he gives suites of apartments to the not very well-to-do widows of men who have served the state in some distinguished capacity. Can you imagine a more charming gift than a suite of apartments in a place like Hampton court with its peace and unrivaled old world gardens?—Arts and Decorations.

TRAVEL BY WATER CHUTE

Flume Filled With Water Offers Thrills in Small Boat in Mountains of Sierra Nevada.

In the mountains of Sierra Nevada, the water chute, or flume, is used as a means of traveling from one spot to another. The flume is V-shaped and made of wood. It stands on wooden trestles, sometimes, where it crosses deep ravines, of immense height. A swift and strong current of water, chiefly used for floating logs and sawn timber, is constantly running down the chute.

The boat made to navigate the flume is also V-shaped and fits inside it. It can be floated down at a good speed in about an inch of water. Only one passenger is carried at a time, and he has to sit as far forward as possible in order to tilt up the back of the little craft. In steep places the pace is great, quite twenty miles an hour being reached.

Riding the flume is full of thrills, though the little craft runs smoothly and as there is no machinery, without vibration. But when once it has started on its journey it cannot be stopped until it reaches its destination. The sensation of rushing alone through space at such a speed is wonderful. But it is a mode of traveling that only recommends itself to the strong-nerved.—London Answers.

Fight Fire With Steam.

In the great oil fields of the West, where the ever-present danger of fire haunts the drillers, steam has been found to be one of the most effective means of combating the flames. As a flash of lightning, a spark from a piece of metal, or a lighted match, may start a blaze that will result in the destruction of millions of dollars' worth of property, ceaseless guard is maintained over the wells. Nevertheless, fires are frequent, and batteries of steam boilers are kept in readiness to fight them, as water would only aid their spread. When a gusher turns into a volcano of liquid fire, it is surrounded by a sand embankment to catch the blazing oil; then huge boilers are brought up, and jets of live steam are turned into the heart of the flames, slowly smothering them. —Popular Mechanics.

City Has Natural Sewers

Bowling Green, Ky., which is built on a limestone formation that includes countless connected subterranean passages, has no trouble or expense in the upkeep of sewers. When a man with a new house wishes to connect with a sewer he merely digs down a few feet until he finds a hole, turns a stream of water into the opening to clear it of obstructions, and then joins his waste pipe to it. The sewage finds an outlet in the river.—Youth's Companion.

ADMINISTRATOR'S NOTICE

Estate of D. C. Haines, Late of of the Township of Norwich, County of McKean, and State of Pennsylvania, Deceased.

Letters of administration on the above Estate, having been granted by the Register of Wills of the said County of McKean to I. E. Bailey of Smethport, in the County aforesaid; request is hereby made to all persons having claims or demands against the estate of the said Decedent to immediately make known the same, and all persons indebted to the said Decedent, to make payment thereof, to the said Administrator without delay.

I. E. BAILEY, Administrator

JUST FUN

PITY THE LION

It was a rather small circus and carried but one lion, one tiger, one elephant and so on down the list.

After the trainer had put the lion through his paces an elderly lady appeared at the cage door and remarked:

"Aren't you afraid that this ferocious beast will attempt to make a meal of you some day?"

"To tell you the truth, ma'am," confided the man in the dazzling uniform, "if business doesn't get any better, I'm afraid I'll have to make a meal of this 'ferocious beast.'"—American Legion Weekly.

SMETHPORT, PENNA.

MRS. H. L. BACKUS,
Owner and Publisher

Entered at the Post Office at Smethport, Pa., as Second Class Matter.

YOUR TOWN

I am Smethport. If the stranger within my gates looks upon me, am I pleasing, to his eye, and if I am such a sight that having seen me, he will remember me all his days as a thing of charm, the credit is yours.

Some of my children are called to high tasks and mighty privileges by opportunity and ambition, to my good repute and to my great honor, in far places, but my strength is not chiefly in these. In those who remain, who are content with what I can offer them and with what they can offer me is my power.

It was Napoleon who said, "I would rather be first in a little Brittany village than second in Paris."

Wood, brick and stone—I am more than that; even more than flesh and blood—I am the composite soul of all who call me Home.

As clearly as the pool throws back the reflection of the rising sun, I shall reflect you so make of what you will.

I am Smethport.

CHARACTER

There are ten thousand questions of business that no outsider can settle, upon which any suggestion of his would deserve nothing but contempt, but the great principles with which I started, the eternal obligations of honesty and integrity and decency, the responsibility of the individual, the supremacy of moral character, the universal application of the ten commandments, in industry as well as in private life these are principals that apply everywhere to the business and professional man alike, to the man who plans the work and pays for it, and to the man whose hands execute the plans and receive the pay. We are human beings before we are founders or workmen. We are all responsible to a higher than human tribunal. No one of us can at least deceive or defeat eternal justice. And we do well to remember that, after all is said and done in the final roundup, character is the only thing that counts. That we must strengthen and not weaken! The debt of strength is to help turn weakness into strength! Our salvation as a people lies not in increased dividends or larger wages, but in a new sense of personal honor and in a quickened conscience. Not in new fashioned machinery, but in old-fashioned virtues, lies our salvation as a people! Virtues as old as humanity, as lasting as God!

JUST TO THINK ABOUT

Some hesitate to pick up a rose, fearing the thorn. Others turn back the thorn, strip the stem and and enjoy the perfume. A successful business is much like a bush of roses; there are blooms and briers and unless we overcome the briers we cannot enjoy the blossoms except at a distance.

Of investigations like the making of many books, there is no end. The indictment by a Federal grand jury in Montana of Senator Wheeler, chairman of the Department of Justice under Mr Daugherty, seems to be another case of the biter bit. The charge against the Senator is that he unlawfully received money as a retaining fee to influence the issue of oil and gas prospecting permits by the Secretary of the General Land Office. Judgment in the case must, of course, be suspended. Senator Wheeler may be the victim of a plot. But the fact that he has fallen into such a plight may suggest to him more restraint in his language and attitude in his own investigation.

The speech of Secretary Hughes at the Republican State Convention in New York was a comprehensive and convincing summary of the claims of the administration to the favor of the American people. He had no difficulty in disposing of the charge that the President has been indifferent to the disclosures of official mismanagement or corruption. Mr. Coolidge has not lost his head, as many have done, but his intention to see full justice meted out has been none the less emphatically expressed. Mr. Hughes further gave an admirable summary of Republican policies and their results. The choice of Coolidge delegates to the national convention was a foregone conclusion. The New York Democrats have come out enthusiastically for Governor Smith as their choice for President.—Philadelphia Inquirer, April 19.

A GLANCE AT THE NEWS

By its action in voting for direct Japanese exclusion Congress has taken a step the ultimate results of which can only be surmised. It was assumed that the Senate would so amend the House bill as to avoid wounding the national pride of Japan, that the letter of protest sent by the Japanese Ambassador at Washington to the Secretary of State, with its allusion to "grave consequences," so angered Senators that the obnoxious provision was all but unanimously passed. It was asserted that the Ambassador's phrase was "a veiled threat," and that to yeild to such interference in a matter of domestic legislation was impossible. This was a distinct repudiation of the advice of Secretary Hughes, highly embarrassing to the administration.

THE HOME NEWSPAPER

If there is anything in your town worth talking about, ten chances to one, your newspapers had a hand in putting it there. If anybody beyond the walls of your burg ever learns that there is such a place as Smethport, it will be through the home paper.

Every town gets its money's worth through the home newspaper.

It's the wagon that carries all our goods to market. It ought to be kept in good repair. It will pay to grease it, paint it and keep its running gears in good shape and keller.

It is the guardian and defender of every interest, the forerunner and pioneer of every movement and the sturdy advocate of law and order.

DOES ADVERTISING BRING RESULTS.

Advertising to be productive of satisfactory results is largely dependent upon the manner in which the advertiser treats the merchandise, article or articles to be advertised.

It is a great deal a matter of judgment. An announcement advertising the sale of farm equipment or blooded stock in the columns of the Ladies' Home Journal could rightfully be called using poor judgment; the advertiser in this instance is simply throwing money to the birds.

There is a striking similarity to this in the choosing of the right of an advertising medium by some merchants, who give the matter of tangible results but scant attention and seemingly to care but little whether their advertisement is read by a prospective buyer.

The newspaper— this newspaper, covering a wide territory and delivered weekly to hundreds of interested readers is unquestionably the correct advertising medium to employ.

DON'TS

Fisherman!

Don't throw your lighted cigarette, cigar or lighted tobacco from your pipe on the ground without extinguishing it.

Don't forget to cover that smouldering camp-fire with dead ashes.

Don't break off twigs as you try to reach some likely looking pool because farmers resent it, and then post "no trespassing" signs.

Don't forget you are a sports man. Be careful.

The home owner has a constructive aim in life. He works harder outside his home; he spends his leisure more profitably and he and his family live a finer life and enjoy more of the comforts and cultivating influence of our modern civilization.

ADDITIONAL PERSONALS.

Raphael Kessler of Buffalo spent the week-end with his parents, Mr. and Mrs. R. S. Kessler, Jr., of West Main street.

Miss Adela Malcolm of Man Hasset, L. I., is visiting her parents, Mr. and Mrs. Archie Malcolm of West Main street.

Miss Lucille Hovis, who attends Lock Haven Normal is visiting her parents, Mr. and Mrs. W. A. Hovis of East Main street.

Miss Margaret Workley, who teaches school at Greigsville, N. Y. is spending her Easter vacation with her parents, Mr. and Mrs. E. W. Workley of King street.

Miss Harriet Brownell, who was to go with her class to Washington is ill with tonsilitis at the home of her uncle, William Specht of King street.

Mrs. Charles Bosworth and daughter, Miss Charlotte, were Olean visitors Tuesday.

Mrs. W. B. Graham and daughter Mildred, have gone to St. Marys for a visit with her parents, Mr. and Mrs. Wrighter.

Howard Strong, who attends Carnegie Tech at Pittsburgh is visiting his parents, Mr. and Mrs. E. W. Strong of King street.

Mrs. Henry Field was a Bradford visitor Wednesday afternoon, to see her daughter who is a patient at the Bradford hospital.

MET WITH ACCIDENT

Raymond Rassmann met with what might have been a very serious accident on Saturday evening, while walking on the concrete road south of his home. Lawrence Applebee of Sartwell, came down the pile with his car and in passing Mr. Rassmann, drove so close that the fender striking him knocked him to the pavement, rendering him unconscious. At first it was thought that he was very seriously injured, but later after a thorough examination the Dr. found that no bones were broken and aside from being badly shaken up and bruised he was not materially injured.—Eldred Eagle, April 18.

PLEASANTLY ENTERTAINED.

Mrs. W. J. McCarrell of Farmers Valley gave an Easter party Saturday afternoon in honor of her two sons, Jack and Billie. A luncheon was served by the hostess assisted by Mrs. and Miss Pearce of Smethport. Those in attendance were Misses Iola Scowden, Wynne Cooper, Elsie Sweeley, Ester Miller Margarette Parker, Ruth Marsh Harriet Rockefeller, Eleanor Wymer, Marcella Oviatt and Wilma Parker, and Masters Clifford Martin, Blaine Parker, Rex and Junior Scowden, Keith Marsh, Chester and Durward Wymer, Brice and Kenneth Pearce, Keith Oviatt: Billie and Jack McCarrell.

KEYSTONE REVIEW PUBLISHED HERE.

The first issue of the Keystone Review, a weekly publication published by Russell Lindsley, editor of the Democrat, with A. E. Morrison, also an ex-service man, as business manager, made its appearance Saturday.

The new paper of eight pages is interesting and well gotten up, it will no doubt be very popular with ex-service men, and should supply a real need.

BIG SILK MILL WILL BE BUILT

The following article was printed in the Buffalo Express on Tuesday:

"The Debrah Silk corporation, a $2,000,000 firm operating mills in Port Allegany, Pa., and Shinnston, W. Va., yesterday filed application for a permit to build a silk mill in Skillen street near Military road. Construction of the new plant will begin immediately it was said last night and more than 200 persons will be employed when it is finished in the fall. The estimated cost is $150,000.

"The factory is to be a three-story building of brick and concrete, and will be 382 feet long. The officers of the corporation are W. J. Bartman of Shinglehouse, Pa., president; M. S. Bredbenner, Shinnston, W. Va., secretary and treasurer; W. B. Filkins, Olean, vice president; George W. Wenz and H. M. Dagget of Lancaster and Joseph J. O'Leary of Buffalo, director."—Kane Daily Republican.

NEWS FROM OUR BELOVED(?) OLD HIGH

Well, once again we present these tidings to the attention and criticism of Smethport's scandal-mongers. For future reference, those who are interested may, with our permission, clip this column.—No copyrights reserved.

Say Seniors! Don't forget that timely little piece of advice which Bob tendered to you concerning Friday morning's journey.

Poor little sweetness is sick with Scarlet fever. When he looks in the mirror, he'll see "Red".

Mary sure does have more than her share of hard luck, don't she?

At last the fire of Miss Lemmler's wrath has broken loose on nothing, or in other words, on the sheets of S. H. S.—Darroll Probst.

Say, it might be a good idea for some of the Freshman to carry umbrellas in Algebra.—I. Pipe the infantile squirt guns.

Our old time class mate, John Dragoona, revisited the scenes of his childhood Tuesday afternoon.

Hazel L. was in a state of nervous exhaustion Saturday and Sunday, but her fears were groundless for Lewis appeared on the scene Monday morning, O. K. with a perfectly white complexion.

Now remember, Ev, don't get in any fights with "Mickey" because you know HE'S cute.

We are certainly going back to the old feudal days when duels occur at the slighest provocation.

Take it any way you want to—tongues, yardsticks, etc.

Favorite Sayings by Our Noted Faculty—

1. "Get the point?"
2. "I think you people are rude". There isn't a lady or gentleman among you."
3. "Now put today's bricks on yesterday's bricks."
4. You may stay tonight and recite that."
5. "It's about time you people were settled."
6. "Now, for instances."

The air certainly has been blue down in the laboratory lately, not caused by experiments, either.

Now, don't take offence. We didn't mean anything you know.

We're all harmless infants, and so are you.

That's all there is, there aint no

"We understand the Northern New York Nurseries, Inc., of Newark, New York, Growers of High Quality Nursery Stock, are desirous of employing someone in Smethport to act as their District Sales Manager. We believe it would pay anyone interested in taking orders for Nursery Stock to get in touch with them, requesting their selling proposition."

CURES FOR RECKLESS AUTO DRIVERS.

Take reckless drivers' autos away from them. This is being urged by many highway traffic experts. They figure that only one driver in twenty is reckless. But even that's a menace. Most reckless drivers who get into court are chronic repeaters not first offenders. Mexico is backward, but some of its cities have sense enough to jail the car of the speeder for six months or more. Germany tackles the problem another way, arresting victims for being reckless and stupid enough to get run over.

SMETHPORT CHURCHES.

METHODIST EPISCOPAL CHURCH

NOTICES, SUNDAY APRIL 27.

Morning Worship, 10:30.

Sam Wood

From "movie" star to director of motion pictures has been the record of Sam Wood. He was born in 1885. He received his education in Stanton school, Philadelphia. He is married and has two children, Jane, his thirteen-year-old daughter, having appeared in several pictures. Sam never misses a game of football, if possible to attend. He plays golf and tennis.

The Why of Superstitions

By H. IRVING KING

CURE FOR NOSE-BLEED

IN MANY sections of the country it is believed that wearing a red bean string on a string around the neck will cure, or prevent, nose-bleed. This is a survival of primitive man's belief in sympathetic magic—specifically that part of it which is classified as homeopathic or imitative magic and which depends upon the law of similarity. The ancients worked this magic both ways. When it was a case of action in general it was a case of like causes like. But when it has strictly a curative process it was "like cures like."

This belief can be traced far back through the ages and prevails today among nearly all peoples who are in a primitive state. The old Greeks and Romans used to "cure" jaundice by means of the stone curlew, whose large yellow eye, we are assured by Plutarch and Pliny, "drew out" the disease from the patient; and the German peasants today use red birds to "draw out" St. Anthony's fire or relieve patients flushed with fever.

Anything red or yellow is supposed to be beneficial in cases where the disease manifests itself by a like color. It will readily be seen, then, how a red bean worn around the neck should, according to the ancient principles of sympathetic magic, cure or prevent nose-bleed. The relation between the primitive man's magic and the modern man's science is interesting. Frazer says of sympathetic magic that it "assumes that things act upon each other at a distance through a secret sympathy, the impulse being transmitted from one to the other by means of what we may conceive as a kind of invisible ether, not unlike that which is postulated by modern science for precisely similar purpose, namely, to explain how things can physically affect each other through a space which appears to be empty."

A Line o' Cheer

By John Kendrick Bangs.

UNCHANGED

RENTS go soaring to the sky;
Shoes and hats are very high;
Food mounts up to fearful heights;
Costly are the world's delights;
Many suffer from the chills
At the rising tide of bills—
But, cheer up! Smiles cost no more
Than they did before the war.
While Good Will and Sympathy,
Just as strong and just as deep
Are as cheap
As they ever were be.

TELEPHONE DEMAND TAXES BELL COMPANY

14,000 New Telephones Every Month Being Added in Penna.

The telephone industry is growing at so rapid a rate, according to Bell Telephone officials, that five years from now there will be almost 1,300,000 Bell telephones in service in Pennsylvania alone. At present this Company is operating about 860,000 telephones in the State.

The people of Pennsylvania are asking for 14,000 new telephones every month. In fact, telephone companies are being taxed to the utmost to keep up with the demand.

In a recent statement, President Kinnard, of the Bell Telephone Company, stated that his Company would connect some 168,000 telephones this year in Pennsylvania.

"We anticipate no falling off in the demand for telephones," said Mr. Kinnard. "During the next five years we will be called upon to connect 925,000 telephones (gross) and our net increase will be almost 425,000 new telephones. Our expansion program this year alone calls for the addition of $40,000,000 worth of new equipment to our present plant in Pennsylvania, and so far as we can see now, the coming five years will require about $175,000,000 worth of new equipment.

"The tremendous demand for new telephones necessitates this expansion. It is our obligation to render good telephone service, and to furnish that service, so far as in our power lies, whenever and wherever it is needed.

"We are doing our utmost to meet the demand for telephone service and are installing the telephones as quickly as we can place the necessary equipment."

Facts About the Telephone

Chicago, with a population about the same as that of Paris, has three and a half times as many telephones as the French capital.

During 1921 there were 160 telephone conversations for every man, woman and child in the United States.

Dr. Paul Kammerer, the eminent Austrian biologist who has been lecturing in this country, remarked in a recent interview that the American telephone service "gives our Viennese service a black eye."

DIVIDEND DECLARED ON PREFERRED STOCK BY BELL TELEPHONE CO.

W. S. Peirsol Retires; Directors Elect J. H. Crosman, Jr., as Secretary and C. L. Richie as Treasurer.

The Board of Directors of the Bell Telephone Company of Pennsylvania at their annual meeting, held in February, in Philadelphia, declared the first quarterly dividend on the preferred stock sold last November, payable April 15, to stockholders of record, March 20. The regular quarterly dividend of 2 per cent on common stock was also declared.

The meeting was marked by the retirement of Winfield S. Peirsol, for many years Secretary and Treasurer of the Bell Telephone Company of Pennsylvania and the election of J. Heron Crosman, Jr. as Secretary, and C. Lothrop Richie as Treasurer.

At the annual meeting of the Stockholders, which preceded the meeting of the board, the report of the Directors for 1923 was approved. J. Howell Cummings was elected director to fill the vacancy caused by the resignation of Richard M. Elliott.

The new director is president of the John B. Stetson Company, with which he has been associated since he was fifteen years old. He was born in Lancaster County, Pennsylvania, and received his education in the public schools and Central High School of Philadelphia.

RADIO

(Edited by Douglas Wartrup, Editor of Radio Merchandising.)

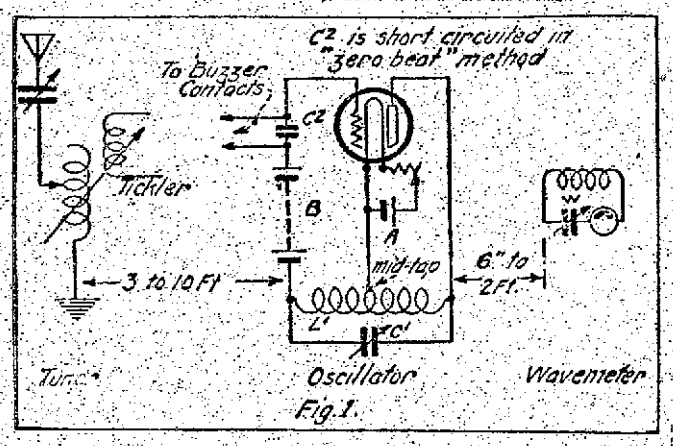

Fig. 1.

There are several methods of calibrating receiving sets, but some of these are not accurate. In most methods there are pitfalls into which, if the experimenter is not very careful, he will fall. Some of these pitfalls will be pointed out and a method given to avoid them.

The most accurate method is the "zero beat" for oscillating receivers. The application of this method to the "single circuit" and "Reinartz" types of receivers will be taken up in detail. The calibration of the nonregenerative and neutrodyne types will be taken up also.

Besides a wavemeter, which may be purchased for from $15 up to $200, a "laboratory oscillator" is needed, and a buzzer, preferably of high pitch. This completes the equipment. The accuracy of the results obtained will then depend first on the accuracy of the wavemeter used and secondly on the accuracy of your own readings.

The diagram of the connections will be seen in Fig. 1. Any vacuum tube, which purports to be at least, from the size of it, a UV200 may be used. The coils are B battery taps consisting from 25 to 35 turns is satisfactory for most cases, however. The A battery may be any size the tube requires. A fixed condenser of .0005 mfd. capacity is connected across the B battery taps. A grid leak of 2 to 5 megohms is connected between the grid and the A battery. A variable condenser of .0005 mfd. capacity is connected across the secondary coil. A pair of phones is connected in the plate circuit. Any battery may be used for the plate circuit, but a potentiometer is necessary for the grid circuit. A grid battery is not necessary, however, as the tube will oscillate and work quite satisfactorily without it. The potentiometer should be connected across a 6 volt battery with the slider connected to the negative side.

A variable condenser of .001 mfd. capacity is connected across the primary coil for tuning. It may be of any standard make.

The tickler coil is placed in the plate circuit of the tube. It consists of from 5 to 10 turns of wire, depending upon the wavelength range desired. The tickler coil is placed in inductive relation with the secondary coil. The closer the coupling between the tickler and the secondary coil, the more energy will be fed back into the secondary circuit and the more likely the tube is to oscillate. The coupling should be as loose as possible and still have the tube oscillate. Too close coupling will cause a squealing noise in the phones and will cause the wavelength to be inaccurate.

To calibrate the wavemeter, it is necessary to have a station broadcasting on a known wavelength. Tune in the station with the wavemeter and then loosen the coupling between the tickler and the secondary coil until the tube just stops oscillating. Then tune in the station exactly by means of the wavemeter. Read the wavelength and mark it down. Then tune in another station of known wavelength and mark it down. Continue this until enough points have been obtained to draw a curve. Use coordinate paper for this curve, laying off the wavelengths on the horizontal lines and the dial readings on the vertical lines. Then draw a smooth curve through the points. This curve will be used in reading the wavelength of any station tuned in.

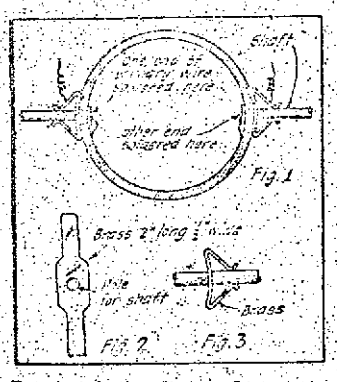
Be sure that the coupling between the tickler and the secondary coil is the same when calibrating as when receiving. Any change in this coupling will change the wavelength.

Tube headings through which you can receive broadcasting of the greatest distance on the detector tube, and, according to the circuit used, the tickler just at the point of oscillation.

Good Spring Contact Will Help Amateurs

By JAMES BARR

I think you can find the following scheme of great benefit to all amateurs. I know myself I had trouble in winding variometers or variocouplers, but just have found out a method which is inside winding or something so that I could turn it through 360 degrees, if necessary, over a period of years. In the old



Details of the Spring Contact for Variometers and Variocouplers.

arrangement I had the wires were continually breaking. The arrangement I used is shown in the accompanying sketch, consisting of a shaft-piece of sheet brass with a hole in the center of a size that will fit over the shaft of the instrument. After it has been inserted, the two ends are bent so as to make a firm contact with the shaft proper.—Radio News.

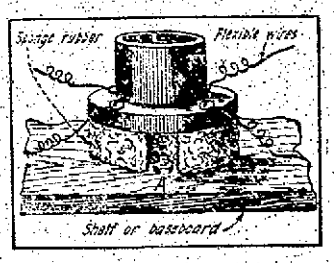
Dry Cells Must Have Most Careful Treatment

Dry cells which are used to light vacuum tubes in radio sets do not last forever, and too much must not be expected of them. If any length of service is desired, the drain must be light, for dry cells simply cannot furnish even a moderately heavy current for more than a few minutes. They will "polarize" quickly if more than the safe current is drawn, and the voltage will fall off considerably. The batteries must then be disconnected and allowed to stand for a short time.

Two ordinary six-inch dry cells should be allowed for one WD11 or WD12, while three are satisfactory for one, two, or three UV199's. Under ordinary conditions, they will then be useful for six weeks or two months. If the set is operated infrequently, they undoubtedly will last longer. Batteries are also known to have been in service for as long as six months, but this is unusual.

Simple Non-Microphonic Socket Mounting Plan

A simple method of preventing a vacuum tube socket from becoming microphonic when the tube and socket are mounted in a cabinet which is subject to vibration, such as when a loudspeaker is used with the set, is to mount the socket on a piece of sponge rubber (such as used in a glass of milk) and the diameter of the piece must be from one-eighth to one-quarter inch wider and longer than the socket as at A in the drawing. Get a piece of pure grey rubber cement from the nearest dealer, place the socket without the rubber in position on the set where it is to be permanently located and mark the two holes that are in the base for fastening it. Then draw a circle around the base. Bore the two holes and place a brass bolt with head on the under side and out the upper side so that the bolt will stick about ⅜ inch or ½ inch above the baseboard but will not touch the socket by ⅛ of an inch when the rubber is placed between. Scrape or roughen the underside of the socket and inside of the circle so that the cement will hold well, and wet the rubber on both sides; wet the socket and place in position as shown in the drawing. Lay a light weight on top of the socket so as to compress the rubber about ⅛ inch. Be sure that the brass bolts are directly in the center of the holes in the base of the socket. Let it stand until dry. When using, insert bulb, and on pressing



A Mounting for a 199 Tube Made of Sponge Rubber Will Materially Reduce Microphonic Tube Noises.

down, the socket goes over the bolts and when you turn it to engage the lock, the bolts hold the socket from turning and tearing loose from the base. Instead of bolts, switch stops can be used and the method of mounting either kind may be reversed so that they fasten in the socket instead of in the base and enter holes in the baseboard or shelf when the rubber is compressed. The socket should be wired with stranded, covered flexible wire [illegible] intended.—Ra-

TREASURER'S SALES

OF UNSEATED LANDS IN McKEAN COUNTY, PENNSYLVANIA.

Notice is hereby given that agreeably to the Act of Assembly approved the 13th day of March 1815, entitled "An Act to amend the act directing the mode of selling unseated lands for taxes, and for other purposes", the following tracts of unseated lands in McKean County will be exposed to public sale or outcry in the Court House in the Borough of Smethport, Pennsylvania, on

MONDAY, JUNE 9th, 1924, at 2 o'clock P. M. unless sooner paid, and the money for which land will be sold, must be paid at the time of sale, otherwise said land will be sold again, and in no case will a deed be given unless the above conditions are complied with.

Notice is also given that in compliance with the Act of Assembly approved the 4th day of June, 1887, "An Act to regulate the collection of Taxes on unseated lands," there will be accrued interest at the rate of 6 per cent per annum on taxes of 1923 from January 1, 1923, and on all taxes of 1923 from January 1st, 1924, until time of payment of the same. P. L. 1887, page 363.

Men You May Marry

By E. R. PEYSER

Has a man like this proposed to you?

Symptoms: Not a bit stylish—in fact he pooh poohs the latest fashions as senseless. Knows the latest publications and books and is awfully high-brow. He likes the self-supporting woman only. Can't stand the girl who always must take her formal Mamma to the show with them. He always keeps a well-paid job with growing prospects. Nothing worries him except wasting time at a bad play or with a poor book. He is a bit bookish, but not so bookish that the fond parents do not worry when he and daughter go out for an all-day picnic. Mothers fear but think him a catch. Daughters love but cannot fathom him.

IN FACT

He is the Most delightful mixture to Himself.

℞ Prescription for his bride: Get next to some good books—not for their bindings, but because of their insides.

ABSORB THIS:

He who reads;
And works by day,
Is just the man
For whom maids pray.

Have You This Habit?

By Margaret Morison

THE KNOCKING CLUB

THE Knocking club had met for luncheon. There were Mrs. van Vechten Brown, Agatha Pim, the novelist; May Hendricks, who wore knickerbockers most of the time and smoked during her meals, and finally Constance Welles, whose engagement to John Wynne had just been announced. They had been nicknamed the Knocking club in college, and among their special circle the name had stuck.

"Her husband talks too much," began Mrs. van Vechten Brown, whose own husband had an impediment in his speech.

"No," said May Hendricks, "that isn't the reason they don't get in—it's his wife, who dresses like a department store window—she's such bad form, you know."

"I shouldn't care how she dressed if she wouldn't murder the King's English," Agatha Pim spoke very concisely and distinctly.

At this point Constance looked at her watch. She had an appointment, as it happened, with John that afternoon, and here with the Knocking club just getting under way she found herself making her excuses and leaving.

As she and John drove along the avenue she repeated the conversation at luncheon. To her chagrin John made no comment. "Don't you think Dolly Brown is amusing?" she insisted.

"I think those three women are like three old alley cats, hugging the dark corners and squalling at everyone who goes along!"

Constance gasped. "John, dear, you couldn't call Agatha Pim an alley cat!"

"No," said John; "I'd call her a pampered Persian pussy spitting upon every passerby!"

"What do you mean?" asked Constance.

"Take Mrs. van Vechten Brown," explained John. "Why does she cry down a man that can talk easily? It dignifies her own husband's not being able to get through a whole sentence. When May Hendricks talks about bad form in others she gives you the impression that she knows what bad form is, and you accept her nicotined fingers and her tobacco breath. And so on and so on—what has Agatha Pim got but 'King's English,' and what has Dolly Brown got but her name?" He must have stopped from sheer lack of breath.

"Then," said Constance, "the habit of throwing stones at other people is really just pretending that you don't live in a glass house yourself." The Knocking club had lost a member.

HAVE YOU THIS HABIT?

Has Anyone Laughed At You Because—

By ETHEL R. PEYSER

You have a weakness for secrets?

You are laughed at because so many folk pour out their troubles in your eoplous ear and you always seem to know why he or she reacts a certain way! Well, what of it? These confiders wouldn't have told you if you hadn't honor, honesty, a tight mouth and a bit of comfort dope. If you like "secrets," ask to be "in" on things then laughter is pretty well deserved. However, people wouldn't continue to tell you things if this were so.

SO

Your get-away here is:

Every one likes to be "in" on things—you're only a human being after all!

(© by McClure Newspaper Syndicate.)

Marriage Kept Secret for Thirty-Seven Years

The secret of a wedding which took place 37 years ago has been kept locked since the death at his home in South Shields, England, of Ald. Colonel Masterman, a cousin of the bishop suffragan of Plymouth.

Masterman left an estate of the gross value of more than $75,000.

Among the bequests was one of $70,000 in trust for life, his wine and furniture and the income from two houses to his housekeeper, Mrs. Martha Mary Ann Broom. It has now become known that "Mrs. Broom" was actually Masterman's wife, says the London Mail.

The marriage took place at the Carlisle register office May 4, 1886. Mrs. Masterman always called herself Mrs. Broom and Mr. Masterman always referred to her as his housekeeper. The marriage was a very happy one.

Of late years only one other living person has been in the secret, Mrs. Masterman's niece, Annie Rebecca Turner, who was one of the witnesses at the wedding.

Masterman was eighty-two years old when he died and his wife is eighty.

California Now Shows Whaling to Tourists

There is a general belief, cultivated by motion pictures and fictioneers, that whales are peculiar to the Arctic circle, inseparably associated with icebergs, Eskimos, polar bears, igloos, scurvy and huge men so bewhiskered as to resemble water spaniels. All of which is "old stuff," for now that California has gone into the tourist business seriously and whole-heartedly whaling is merely a week end party, a sort of post-graduate work in connection with the rod-fishing course, says George Creel in the Elks Magazine, according to the Detroit News.

At Trinidad, a point of land jutting into the Pacific near the California-Oregon line, there is a whaling station of such proportions and activity that it can be smelled for 50 miles on a calm day, while, when the wind is right, distant San Francisco grubs for its handkerchief. Three boats, mostly manned by Norse, Danes and Swedes, ply up and down the coast, and six whales a day is the average catch.

Make Money From Ferns

The unobstrusive, almost forgotten carpet of the Green mountain forest promises to bring back a measure of prosperity to a group of the most impoverished of the back hill towns of southern Vermont. Probably 100,000,000 ferns have been taken from the green hillsides and deep forest recesses of the narrow strip of back hill country in Windham and Bennington counties in the last few months. The income to declining rural villages from this harvest of the wilds that took no sowing has amounted to almost $200,000, says the Detroit News. Whole families pick for the 14 weeks' season, and make a year's income.

Fern picking is crowding the maple sugar business for leading place among the profit-bringing side enterprises of rural life along one ridge of the Green mountains.

Value of Oyster Fishery

Oyster culture represents the most valuable fishery in the United States. The 1920 yield approximated 30,000,000 bushels, having a valuation of $15,000,000 to fishermen. The latest inventory as to the magnitude of the industry in personnel and equipment employed for twelve months, indicated that 67,257 persons were thus engaged, drawing wages, aggregating $10,876,801, using vessels and apparatus appraised at $17,000,000. Ninety-nine per cent of the oysters are taken from the Atlantic and Gulf coasts, Maryland, Virginia and Connecticut, in the order named, having foremost ranking in yields. It is said that Chesapeake bay gives up more oysters than any other body of water in the world. Virginia and Maryland, through which this huge pond navigates, produce 5,000,000 bushels of oysters each annually. Connecticut is credited with an output of 4,000,000 bushels.

Watt the Fly

Electricity is turned to a new use. Sentence of death has been passed on the all too common housefly by electrical engineers. A contrivance has been designed to receive current from the ordinary lamp socket. It is to be baited and affixed to a wall or some other place where flies gather. Only a fraction of a watt is required for a fatal shock, the engineers say.

A new device for fly extermination merits a new slogan: "Watt the fly" is in character with the reported progress, eh, watt?—The Nation's Business.

Diplomatic Reply

The irate customer shook his portrait in the photographer's face.

"Do I look like this picture? The thing's an outrage! Why, you've given me an awful squint—and the look of a prizefighting bully! Now, answer me, and no nonsense about it! Do you call that a good likeness?"

The photographer scanned the print, then looked at the customer. "The answer," he said, "is in the negative."

And the customer went away with a look of deep thought on his face.

Relative Term

Prof—You should think of the future.

Youth—I can't. It's my girl's birthday and I have to think of the present.

TELEPHONE SHOWS STATE PROSPERITY

Bell Executive Tells of Plans of Company For Expansion During 1924.

J. C. LYNCH

The rapid growth of the telephone business in Pennsylvania which has caused tremendous amounts of new equipment to be added to the system this year will continue throughout 1924, according to a statement by J. C. Lynch, Vice President of the Bell Telephone Company of Pennsylvania.

"Our $30,000,000 program which we are just completing seemed like an impossible feat at the beginning of the year. But present indications are that next year we will have to add about $40,000,000 to keep pace with the needs of the people of Pennsylvania for new telephones. Of this we expect that $15,000,000 will go into new switchboards and central office equipment. The balance will be required for new wire, about 630,000 miles, for new buildings and enlargement of present buildings and for the hundred and one other things which are necessary to make a telephone system function. From the way things look now we will add more than 80,000 new telephones in 1924.

"The telephone growth is a barometer of business conditions. During 1921 to 1923 more telephone equipment was added in Pennsylvania than in any previous six years. And 1924 from the present outlook will far surpass anything even dreamed of a few years ago.

"Pennsylvania is a great industrial state and the fact that such rapid strides are being made in the telephone business is a sure indication of the general prosperity of its diversified activities."

Divorce in 283 B. C.

An Egyptian divorce paper made at 283 B. C. has been discovered by a translator at the University of Pennsylvania museum. It states, "I have abandoned thee as wife. I have no claim on earth against thee on account of a wife today onwards; instantly, without delay."

HOME—

How much will you pay for safety, for permanence, for comfort?

Portland Cement, the material making this possible, is the cheapest of all products undergoing a complete process of manufacture.

A permanent, fire-safe home can be built for from 2% to 5% more than one of impermanent materials. The protection of your investment, the safety of your loved ones, can be assured for a ridiculously small outlay. And such a home is warmer in winter, cooler in summer, and more sanitary the year 'round.

Ask your building material dealer for facts and figures on such construction. Your contractor will also tell you that it is more rapid, as well as safer, than temporary building.

ATLAS PORTLAND CEMENT

Making Sugar From Beets

Gardeners who cannot raise sugar cane are interested in a process, devised abroad, for extracting sugar from beets, a process designed especially for the amateur. Great care is exercised in harvesing the roots that the tender skin is not broken. The first operation is to remove all dirt by washing, after which the beets are boiled in water until the skin peels off easily. They are next cut into thin slices, placed in a pan, just covered with water brought to a boil once more and then left to simmer for ten hours. The resulting pulp is then put into a muslin bag and squeezed until all the juice is extracted. The juice is boiled down to a very thick sirup that makes a good substitute for commercial sugar. As the sirup will not keep for more than a few weeks, it is found advisable to make only a small quantity at a time. The roots, however, can be stored for a long period without deteriorating if they are kept dry and free from frost.

Where Judges Get Little

Austrian judges are the most poorly paid of all state officials. Those holding the other positions, and most highly qualified, receive only 3,000,000 crowns a month—not much more than $40 and also after from twenty-five to thirty years' service. So poor, in fact, are some of the judges that they cannot afford to buy their official robes or talars, and preside in court in the shabbiest clothing. The state is supposed to furnish them with talars, but has not done so for the last two years. Letter carriers, railway men, policemen all receive their uniforms free, but the judges must find their own or go without.

Make Your Trip More Enjoyable by a Refreshing Night on Lake Erie

(Your rail ticket is good on this boats)

Thousands of west bound travelers say they wouldn't have missed that cool, comfortable night on one of our fine steamers. A good night's ocean rest, a long sound sleep and an appetizing breakfast in the morning.

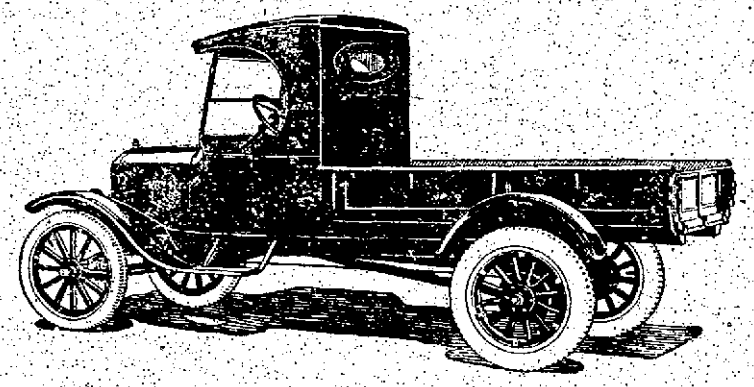
Ford Steel Body Truck $490 f. o. b. Detroit



Why Commercial Users Prefer the Ford

There is much significance in the fact that more than 75% of all commercial cars of one-ton capacity or less in the United States are Fords.

This overwhelming preference for Ford haulage units has its basis in the low cost of Ford transportation, the rugged construction of the truck itself, and its unusual adaptability to every line of industry.

Mechanical excellence, simplicity of design and ample power are further factors that have contributed to the popularity of the Ford One-Ton Worm Drive Truck.

The Ford One-Ton Truck equipped with an all-steel body and cab is now available as a complete unit, priced at $490 f.o.b. Detroit. Screen sides and canopy roof that may be easily fitted to this unit are supplied at small additional cost.

Mr. and Mrs. C. J. Altdorfer and little son, Jack spent Sunday with the latter's mother, Mrs. E. R. Mayo of West Main Street.

Sixteen members of the Senior Class left Friday for their annual trip to Washington, Philadelphia, and Atlantic City. Prof. Stanley Bright chaperoned the party.

Those who went are: Harry Abbey, Janette Abbey, Edna Bloomster, Margaret Bloomster, Robert Apple, Mike Coylestro, Richard Stratton, Ellen Hurly, Helen Russ, Cleva Parker, Robert McAlister, Ted Backus, Everald Munday and Russell Norman.

OBITUARY

DEATH OF EDWARD HAVENS

The death of Edward P. Haven of Turtle Point took place last week Wednesday of a complication of diseases, following a four weeks illness. Funeral services were held Saturday afternoon at the home Rev. Prosper Miller officiating, and interment was made in the Lewis Hill cemetery.

Mr. Haven was a farmer by occupation, having resided in this section for about forty years. He was 68 years old, having been born at Grove, N. Y.

He leaves three sons, George of Washington, Henry of the U. S. Navy and Ralph of Turtle Point, one daughter, Eugenia Haven of Washington, one brother, R. A. Haven of Port Allegany, and two sisters, Mrs. Susan Andrews of Belmont and Mrs. Clarence Scott of Canaseraga, N. Y. His wife preceded him in death 26 years ago.

Mr. Havens was well known in this section, and will be missed by a large number of friends.—Eldred Eagle, April 17.

Changes in Long Distance Telephone Rates

CERTAIN changes in rates for Out-of-Town calls are provided in the new schedules which were filed with the Public Service Commission of Pennsylvania on April 1st to become effective May 1st.

Many of the Station-to-Station rates which are now 25c or over will not be increased. Where the rates are changed the increase in most cases is not more than 5c. There is no change on rates of 75c or over.

Person-to-Person calls under the new schedules will be charged for at approximately 40 per cent. more than the Station-to-Station day rates, instead of about 25 per cent. more, as at present. This applies only on calls on which the Person-to-Person rate is less than $1.00.

Complete details may be secured at the Business Office

Wooden Toy Industry Booms in United States

The wooden toy industry is booming in America, the World war having given it a big lift, because it temporarily discouraged German manufacture, formerly the chief source of supply for the American market.

The tariff now in force sealed the fate of German competition in wooden toys in this country and since that time several large centers of toy manufacture have sprung up, Winchendon, Mass., being the largest in the East, says the New York Times. The only wooden toys of any prominence that escaped the tariff embargo is the artificial Christmas tree, which has been reclassified and transferred from the wood product class to the feather schedule, as a large portion of artificial Christmas trees are made of feathers.

Some German toys are on the market at high prices, according to the New York State College of Forestry, which says: "The mechanical toys manufactured in Germany are superior to the American product as a general rule. Many of these are made of metal, such as battleships, locomotives, trains, railroads, automobiles, fire engines, mills and planes, although a large portion of the planes are made of wood. German dolls are in many cases preferred to the American products."

"American manufacturers excel in the construction of the larger toys, such as sleds, skis, carts, snowshoes, toboggans, etc," says the college. "The kind of wood often depends on the by-product of the lumber manufacturers near which the toy factories are usually located. For this reason, one manufacturer uses pine, another chestnut and another various hardwoods."

"Toy factories are an excellent outlet for the by-products of many working mills and go a long way toward making the operation of the timber and coarse products mills profitable. Owing to the growing scarcity of wood and the increase of the cost of labor, wooden toys have increased in price in the last ten years about 100 per cent. Reforestation and scientific forest management will tend to reduce their cost.

On With Home-Owning

The register of deeds of Wyandotte county says Kansas City, Kan., is in a fair way to become the leading city of the country in the percentage of home owners. That official has been noting the unusual number of realty transfers, and the fact that many working men and others with limited means have been buying homes. It will be great for Kansas City, Kan., of course, if that city gets in a foremost place in this important matter; but building permits indicate that Kansas City, Mo., and many other places are going right ahead in this home ownership business.

Few movements of greater possible value ever went forward in the country. A city or a community of any kind with a high percentage of home owners is bound to be made up of a good class of citizens; families with children; men and women of settled habits, and persons who, because of a proprietary interest, are likely to show more than the usual concern with community affairs. The home owner is the least likely convert to bolshevism or any other ism that doesn't grow out of sanity and common sense conditions of living.

One way to promote home owning is to attract capital into the home owning business.

Substitute for Wood

The development of asbestos lumber has come at a time when grave concern is being expressed as to the possibility of our national forests being exhausted by present-day building needs.

Combined with cement, asbestos fibers produce a "wood" which can be sawed, nailed and shaped and fabricated in any size from a one-eighth-inch strip to the heaviest timber. It can be painted, sanded, stained and treated in any way in which ordinary wood can be treated for decorative effect. But, unlike ordinary wood, it requires no treatment for preservation and need never be replaced, because it is indestructible.

Small houses and warehouses already have been constructed successfully of asbestos "wood," and it has been used with equal success in the partial construction of larger buildings. Lumbermen and builders have expressed themselves as believing that the new product will go far toward relieving the lumber scarcity which is a source of anxiety both to our scientists and our government.—Popular Science.

Waste and Its Preventive

One thing is indisputable—namely, that it is thoroughly bad policy for a municipality, or any other governmental body, to live beyond its income and then issue bonds—and many cities do—to cover the deficit. The necessity of a scientific budget is not limited to the national government. The reputation of county and city government is notoriously bad and the prevalence of waste and spoils is attributable to loose methods of spending appropriations.—Chicago News.

Community Building

Many Changes Made in American Architecture

American architecture has gone through a good many phases since the original log huts were built by the early settlers in Virginia and Massachusetts. Present-day home building, however, is far advanced in point of beauty over any period in the country's history.

In the beginning of the seventeenth century the general rule was for unpretentious houses, and there are many survivors today of the early homes that were put up in this period all over the New England landscape. During the Revolution there was a general lull in building, with a great revival immediately after the war. The post-Revolutionary period is distinguished by the increase in the number of pretentious homes. The country was growing richer and people were able to put more money into their homes.

With the general activity in building and with the end of the Revolution there grew up a demand for information regarding architecture. This was met by the publication of a number of books concerning architectural forms and details, one of the chief of which was Asher Benjamin's "Country Builder's Assistant," published in 1797. These books gave details of classic and Renaissance architecture, and actually started the study of architecture in this country. Architects soon began to appear, men whose individuality marked their work, bringing their names with their designs, down to the present time.

The study of classic forms soon started the Greek revival, the next step in our architectural development, which in turn was followed by the "Queen Anne" cottages and the Victorian era. Organized architectural education freed us somewhat from these styles, took us through the French influence of the nineties and brought us to the present period of such complete information that we are now able to design in any style a client wants with fairly complete success.

Through all this confusion there persists a very genuine interest and appreciation of our first periods and the simple colonial house of the Eighteenth century will continue to be an inspiration.

Cheering the North Room

That bugaboo of the household, the tiny north bedroom, which always seems cold and cheerless, finds its space increased and the light doubled when the proper furnishings are placed within. There is no better furniture for this purpose than ivory enamel.

With ivory walls and a plain mauve rug the walls of the room seem to be fairly swept away to give all the room one could wish. To keep the room from having the white look of a hospital operating room, however, warm colors, such as red, yellow, orange or red-violet, should be introduced in the upholstery of the little chair, in the window hangings and in the little accessories such as vase and lights.

The vanity dresser is doubly welcome in the small bedroom for the sake of its ample stowaway room in the deep drawers. This addition was made to the suite when an original French model was copied, for milady of America must keep her pretty veils and gloves in more restricted areas.

Ivory enameled furniture is practical, for it is cleaned easily.

"What Is Life of City?"

"In a community in the East, a group of men were met together to consider the menace to the health and enjoyment of the citizens by the smoke nuisance. One business man was opposed to regulation, and put his objection in a single revealing sentence: 'The smoke may be the death of the people, but it is the life of the city.' 'The life of the city' and by that he meant the only kind of city he could think of, a city of commercial enterprise, of hasty methods of getting rich, of bank balances built up at no matter what impoverishment of finer things. For the real city, the city of the inner values of men's souls, of beauty and spaciousness and joy, he had no conception. When men begin to love beauty and become sensitive to the fine ideals which a desire for beauty creates, they will not tolerate the stupid perversion of reality, which would find 'the life of the city' in the 'death of the people.' They will insist that whatever advantage be held in abeyance, light and life and cleanness for men and women shall be preserved."

Built-In Furniture

At a slight increase in first cost the installation of built-in furniture will add much to the comfort, convenience and value of any small house. Such attractive features as built-in china closets, bookcases, mantelpieces, breakfast nook furniture, tables and benches, closet shelves and drawers, medicine cases, ironing boards, kitchen dressers or cabinets and refrigerator compartments are lasting. Careful consideration should be given to practical built-in furniture.

Community Building

Scientific Planning for Healthy Growth

A committee of twenty-one meeting at the City club in Chicago to draw up specifications for a metropolitan planning commission forecasts a Chicago of 8,000,000 population extending, roughly, from near the Indiana state line to a point near the Wisconsin line. We believe that is no wild dream. It is a possibility, if not a probability.

But whether or not Chicago proper ever extends its present boundaries, there can be no doubt that definite, scientific planning is essential to insure healthy and continuous growth. The Chicago Plan commission has worked with admirable good sense and efficiency. But problems of modern city life which have arisen since its inception have greatly complicated its task. The automobile traffic and the tendency to concentrate both business and residence in high buildings constitute a central district menace a new duty upon city planners.

We are inclined to be archaic in our ideas. Athens and Rome and Constantinople were planned and built upon one level. American cities, constructed many centuries later, have rarely advanced from that.

In Chicago, with the limited exception of elevated railroads, the Michigan avenue bridge, Wacker drive and tunnels beneath the river, we are still on the one-level basis of ancient Athens. New York has gone a step further with the subway, and eventually we will have that. But even that will not be enough.

There can be no adequate planning for a modern great city which does not provide for more than one level for traffic. Chicago knows it, but that is not enough. It must act upon the knowledge. New York knows it and is acting. Steps are being taken there to provide a third level of transportation, for pedestrians, above the ground. The entire city has been zoned, with groups of architects in charge of the various districts, to work out this plan. The colossal plan of adding some 4,000 acres to the lower end of Manhattan island includes the construction of three street levels—one for heavy vehicular traffic, a second for passenger automobiles, and a third for pedestrians.

Chicago must come to it. The committee of twenty-one may properly plan for a city fifty miles long and of 8,000,000 population, but it should not neglect to plan first for a city of our present area, but three or more stories high, in so far as its streets are concerned.

School for Sick Pupils

A special hospital school, maintained as part of the regular school system of Minneapolis for children who have tuberculosis, is described in the January number of School Life, published by the United States bureau of education. Children excluded from the regular schools on account of having this disease are required under the compulsory education law to attend this school if they are able to travel to and from school every day by street car. Regular work of the eight elementary grades is offered, and pupils may be transferred to this school or back to a regular school without loss of standing.

Classes are held in open-air rooms, which are kept at a temperature of 45 degrees. The children wear Eskimo suits in the classroom. Two light meals and a full meal are served during the day, and after the full meal the children have a sleeping period. "Sun-lamp treatments" are given every morning. Children requiring hospital treatment for a short time are placed in a ward and are attended by a physician and a nurse.—Chicago News.

For Civic Improvement

It is the plan of the Federal Council of Citizenship Training to co-operate with the many non-governmental agencies, public and private, which are engaged in seeking to improve citizenship throughout the country. It has begun to work out the means of such co-operation.

It is estimated that there are about 2,000 national agencies which are applying themselves today to the problems of social and civic improvement. There are other thousands of local agencies engaged in the same kind of work.

If these agencies can be brought to work together along only a few lines, it is felt that the impetus given to the movement for better citizenship will be increased.

The American National council, of which President Harding was the honorary president and Frank A. Vanderlip the acting president, will cooperate in every way with the governmental agencies in the crusade now launched.

Pet Names Given Cities

"Little old New York" is the pet name of the commercial capital of the United States. It is neither "little" nor "old," but these words are used in their affectionate sense. The pet name of Boston in the United States is "the Hub." This is a little more malleable, and is used more by outsiders than by Bostonians. It is general belief that the latter regard their intellectual city as "the hub of the universe," the city around which all other cities revolve.

Clifford Anderson was a Smethport visitor Saturday.

Mr and Mrs. A. J. Spadafore spent Sunday in Crosby.

Mrs. Fred Russell was a Johnsonburg shopper Friday.

Bernice Wilcox was visiting her parents in Christian Hollow.

Miss Margaret Hagman visited her sister Mrs. John Anderson of Marvindale Tuesday.

Miss Vera Patterson spent the week end with parents in Smethport.

Albert Nester of Pittsburgh is visiting Mr. and Mrs. A. J. Anderson.

Margaret Hagman of Olean is visiting her sister Mrs. Clair Flickinger.

Louis Rizzo who is employed in Pittsburgh spent Easter with his father.

Mrs. Guy Russell of Sheffield is visiting Mr. and Mrs. Fred Russel of this place.

Miss Mary Spadafore was in Marvindale, Saturday visiting her sister, Mrs. Swanson.

Bruno Muzzi returned from Johnsonburg Monday where he spent a few days with his cousin.

Mrs. Arthur Murray of Ridgway spent a few days with her parents Mr. and Mrs. Burmingham.

The Misses Lottie and Anna Dibler were week-end guests of Miss Mary Danner of Instanter.

Elmer Connors has returned from Emporium where he was visiting for a few days of last week.

The Misses Ellen and Blanche Bush of Betula are visiting their brother Merle Bush of this place.

Mr. and Mrs. Swanson and children of Marvindale were visiting the latters parents Mr. and Mrs. Spadafore.

Miss Ada Searfoss of Lock Haven is spending a few days of this week with her parents Mr. and Mrs. Paul Searfoss.

Francis Flynn who attends St. Bonaventure College spent the Easter Vacation with his parents, Mr. and Mrs. Patrick Flynn.

Mr. and Mrs. Birmingham and daughter Margaret left for Ridgway Saturday evening where they will make their future home.

CORYVILLE

Gilbert Rice was in Olean Friday evening.

Edward and Herman Goodyear are working in Olean.

E. A. Guenter was a business visitor in Olean Saturday.

Frank Shick and Geo Parker were in Eldred Saturday.

M. P. Blakeslee of Eldred was was here on business Saturday.

Mr. Jack Williams of Eldred was a guest of Miss Virginia Mosier recently.

Laurence Washburn, who is employed in Bradford was home over Sunday.

Mr. John Finley and Miss Leona Keesler were married recently in Smethport.

Frank Moody of Port Allegany visited relatives here for a few days last week.

Mrs. Jessie Washburn spent Wednesday and Thursday of last week with her daughter, Mrs. Samuel Parrett and family of Bradford.

Mrs. Mae Williams of Jamestown who has been visiting her parents, Mr. and Mrs. B. F. Cory returned to her home Saturday.

Kervin Cotter of Eldred and Mrs. Orrie Moody of Port Allegany were guests at the home of the latters daughter, Mrs. Vernon Rees, Tuesday.

Lawrence Grabe Jr. who has been going to school in Coudersport is spending Easter vacation with his parents, Mr. and Mrs. Lawrence Grabe.

County Agent P. S. Crossman and Mr. Spencer of State College were giving orchard grafting demonstrations at the homes of Ray Mosier, H. L. Harmon and Geo. Parker Saturday.

NEW SUBMARINE CABLE LINKS PENNSYLVANIA AND NEW JERSEY

The large submarine cable being fed to the bed of the Delaware River Between Philadelphia and Camden.

A new telephone submarine cable was recently laid in the Delaware River between Pennsylvania and New Jersey, by the Bell Telephone Company.

Dredging the deep water channel from Philadelphia to the ocean endangered the two cables which had been in use for a number of years. Telephone engineers decided to lay a new cable outside the zone to be dredged so that there would be no danger of the service being interrupted.

It was decided to lay the new cable from a manhole north of the Pennsylvania Railroad Station in Camden to the foot of Chestnut Street in Philadelphia. This would be outside the area to be dredged.

After all details were arranged the large cable containing 1800 wires and weighing twenty-five tons was mounted on a boat and placed in the form of a figure eight. By doing this the cable could be fed from the boat without snarling.

The boat was loaded on the Camden side of the river. A truck pulled one end of the cable from the boat to the manhole where it was made fast. A tug was then fastened to the boat and all was in readiness for the laying of the cable.

The tug started across the river pulling the boat from which the cable was being fed to the bed of the river. Nine minutes later the tug reached the foot of Chestnut Street and the cable was nestling on the bottom of the river preparatory to being put into the service of conveying conversation between two great states.

Are We Extravagant?

Here are some costs on Studebaker cars—

Would you have us cut them down?

WE are lavish on Studebaker cars. For some features we pay three and four times what they need cost.

Here are some of those costs which affect you. Tell us—would you want any one reduced?

Our prices on high-grade Sixes run from $975 to $2685. They stand at bottom in the fine-car field, despite these extra costs. All because the demand requires 150,000 cars per year.

But they could be lower if we cut these costs. Would you have us do it?

Engineering—$500,000

Our engineering departments cost us $500,000 yearly.

Our Department of Research and Experiment employs 125 skilled men. It spends vast sums in analyses and tests.

Our Bureau of Methods and Standards fixes every formula, every requirement. It makes 500,000 tests per year to maintain our high standards.

We make 30,000 inspections on every Studebaker car during manufacture before it goes out of the factory. We employ 1,200 men to do that.

Those are heavy costs. But remember how they are divided — by 150,000 cars per year. They form but a trifle per car.

$50,000,000 in plants

We have invested $50,000,000 in modern plants and equipment. $8,000,000 in drop forge plants. $10,000,000 in body plants — as the only way to do Studebaker coach work.

These plants are equipped with 12,500 up-to-date machines, many of them very expensive.

But consider the alternative. Profits to other makers. We save up to $200 on some bodies by building them ourselves.

15% extra on steel

On some steels we pay a bonus of 15% to the maker. Just to get our formulas exact. We could save that extra on "commercial runs."

We machine the entire surface of crank shafts, as was done on Liberty Airplane Motors. The extra cost is $600,000 per year. But the results are that perfect balance, that absence of vibration.

Every Studebaker car is Timken-equipped. The Special-Six and the Big-Six have more Timken bearings than any car selling under $5,600 in America. The Light-Six more than any competitive car within $1,000 of its price.

Other costly extras

Our bodies are finished with 18 operations, including 15 coats of paint and varnish.

We use real leather upholstery. The cost is about $25 per car over imitation leather.

That Chase Mohair upholstery in closed cars is made from the soft fleece of Angora goats. A velour or worsted upholstery would save us up to $100 per car.

* * *

The many extras on our large closed cars would cost much if you bought them. The nickel-plated bumpers, the extra disc wheels and cord tires, the steel trunk, the courtesy light, etc.

Extras to our men

We pay the highest labor scale. Then we add extras to it.

Men who are with us five years or over get 10% of their year's wages in an anniversary check. Those anniversary checks last year cost us $1,300,000.

After two years all employes get a week of vacation with pay. That cost us last year $225,000.

Old employes who retire get pensions. Our co-operative department costs us $2,000,000 per year.

All this to keep men with us while they grow more and more efficient. To make them happy, so they do their best.

This is all paid by people who buy Studebaker cars. But we figure that each such dollar saves us five dollars. Don't you agree with us?

The utmost in car value

The object is to give you the utmost in car value. You will find we do that if you make comparisons. In any Studebaker model, you will find scores of ways in which it excels any rival car.

That is why, in the fine-car field, the Studebaker leads. The demand has almost trebled in the past three years. These cars have become the sensation of Motordom. On some of these models we have never yet been able to meet the demand.

We spend money lavishly. We build without regard to cost. But, in our quantity production, we still bring costs to bottom.

You should learn what these things mean to you before you buy a car.

Don't Buy a Fine Car
until you see the leaders

Studebakers hold the top place in the fine-car field today.

Last year, 145,000 people chose them against all rivals. They paid $200,000,000 for them.

For 72 years the Studebaker name has stood for the utmost in quality. It will never stand for less.

Today there are assets of $90,000,000 staked on Studebaker cars.

Don't pay $1,000 or more for a car without knowing what Studebaker offers. You will find here some scores of advantages. Learn what they mean to you.
